

José I. Carpanzano

Dear Hiring Staff,

In today's threat landscape, organizations don't need more operators; they need architectural thinkers who design resilient, autonomous ecosystems from the ground up. With over 17 years in IT Operations, DevSecOps, and Offensive Security, I bring immediate, uncompromised value to your infrastructure:

- **Enterprise Resilience:** Proven success governing SOC, IAM, and Cloud Security for Fortune 500s (GM, HP, EDS). I scale security without bottlenecking business agility.
- **Advanced DevSecOps:** Expert in engineering Zero-Trust perimeters, kernel-level IDS/IPS, and autonomous AI-driven ecosystems with strict privilege segregation.
- **Offensive Intelligence:** Top 5% on Hack The Box (119+ systems breached). I build defenses based on how real threat actors operate, neutralizing vulnerabilities before exploitation.

WHY YOU NEED ME ON YOUR TEAM

With nearly two decades of trenches-to-architecture experience, I don't just "maintain" systems—I eliminate entire attack vectors by design. I am an autonomous problem-solver who hardens perimeters and streamlines pipelines while others are still reading alerts. By hiring me, you acquire an architect who will take ownership, enforce technical excellence, and elevate your security posture from day one. Let's build infrastructure that cannot be compromised.

I am ready to discuss how my expertise aligns with your most critical objectives.

Sincerely,

José Ignacio Carpanzano

"Securing the evolution of autonomous systems through robust governance, immutable infrastructure, and high-performance engineering."
